A cold front moved through the region during the afternoon and evening hours. Abundant sunshine allowed for the unstable conditions. However a poorly sheared environment limited the overall threat, bolated wind damage reports were noted. A weak upper level system moved across the region with abundant moisture in place. While CAPE was sufficient for thunderstorms development, shear was somewhat lacking resulting in storms more of a pulse nature. Storms attempted to organize somewhat courtesy of several outflow boundary interactions. Isolated wind and hail reports were noted.

The public reported an area of uprooted trees in Athens with smaller tree branches also down in the area.

A moderately unstable, but poorly sheared environment was in place across the region. A weak disturbance aided in widely scattered thunderstorms. One thunderstorm produced localized wind damage in northern Indiana.

The automated weather station at Fort Wayne International Airport recorded a 63 mph wind gust during the collapse of a thunderstorm over the field.

An unstable atmosphere allowed for isolated thunderstorms to develop. While overall conditions were not conducive to an increased risk of severe weather, one thunderstorm produced local winds over 60 mph at a local airport as it collapsed.

Emergency management officials reported a large tree was uprooted towards the northeast on Summit Street, between Main and State Route 65.

A cold front moved through the region during the afternoon and evening hours. Abundant sunshine allowed for the unstable conditions. However a poorly sheared environment limited the overall threat. Isolated wind damage reports were noted.

Sheriff department officials reported extensive flooding in several areas north of U.S. 30, especially around Cairo and Beaverdam. Water up to 1 foot deep was flowing over several roadways. Flash flooding occurred across Interstate 75, south of Mile Marker 138, resulting in closure of the Interstate in both directions. Pictures were also received of high flowing water near the intersection of Hillville Road and Stewart Road, north of Cairo. While no specific details were available, local media reported eight to 10 households suffered serious flooding problems. In addition, the Cairo Branch of the Lima Public Library suffered water damage as six inches of water entered the building. Hundreds of books were ruined as a -result. The threat for life threatening flash flooding ended during the mid-evening hours, but high water remained in several areas into the overnight hours of the 29th.

A weak trough was located across northwestern Ohio during the afternoon and evening hours. A moist, but marginally unstable atmosphere allowed for thunderstorms to develop and remain relatively stationary over the same areas. Local rainfall amounts of 2 to as much as over 6 inches fell across mainly Allen County, resulting in flash flooding. The flash flooding resulted in a small portion of Interstate 75 being closed due to high water.
